

The Lifeblood of the Nation

By J.Hamilton

The economy has been in the news lately and for good reason: its failing! Many have been caught in the gyrations of the stock market, the bond market, as well as the many financial instruments that seemingly represent the lifeblood of our economy, and we are in catastrophic failure. If one were to take the pulse of the world as created by the humans at this particular juncture, we would find an erratic heartbeat at best and at worst, a heart about to leap out of the chest of the patient!

Humans create reality, individually and collectively, and we are seeing the culmination of collective reality creating suggesting that humanity still has a great deal to learn. And while it would be thought that arriving to work in \$3,000 suits, driving sophisticated automobiles and carrying the latest in laptops (opposable thumbs and all) would suggest we are capable of fiscal responsibility, humanity is still learning about the difference between focus driven by greed, manipulation, hoarding, stealing, taking advantage, etc., and the higher qualities of intention driven by a calm sharing of resources that give rise to a stewardship of not only our resources, but each other.

Alan Greenspan, an American economist and past chairman of the Federal Reserve, has come into the news in this "snapshot of time" as well. And, while I cannot say that I am (or not) a fan of Alan Greenspan, apparently he is truly startled by the turn of events in the latter months of 2008. He has stated that he is completely dumbfounded by the risky policies of large corporations and investment banks that seem to be unable to manage themselves, i.e., grabbing what they can to the point of self-inflicted catastrophic failure of their most fundamental obligations. He is quite surprised to see basic common sense and the ability to survive and flourish, i.e., exist, seems to be "out the window" with many of these large institutions.

Greenspan believed in deregulation and a free market economy – and probably rightfully so, because he believed that self-preservation would underlie fiscal responsibility. Instead, we have witnessed lemmings, large and small, crowd over the cliff with no regard for anything but the almighty buck. In other words, in greed and bottom line profits, huge corporations representing hundreds of billions (and even trillions) of dollars display no more sense than a rock – not to disparage the mineral kingdom.

It is interesting to note that there are two major divisions of characters at play on planet earth – something I capably identify in my book, ***Visionaries Thrive In All Times*** and come back to occasionally. The two main characters are the humans and the artificial entities. The humans are characterized as flesh and blood entities, young, naïve and impressionable for which they fail to learn from each other, other than at the most fundamental of levels. They typically teach what they are afraid of, for which resistance and fear and doubt seem to be the end product. They also seem to be unable to stock

the larder of subsequent generations, i.e., the wisdom behind accumulated financial wealth and hard-won wisdom, much less a family-driven philanthropic contribution to those less fortunate, even though they have access to the most sophisticated innate, built-in guidance imaginable.

On the other hand, corporations, trusts and foundations, etc., legally designated as *artificial entities* and *creations of fiction* on paper infused with statutory life by government, "live" lives of as much as several hundred years and longer, learn continuously, maintain a certain discipline and record keeping, and effectively forward their values into the future. Corporations, i.e., artificial entities, have learned to rely upon formulas of success that seemingly work over generations. Further, they tirelessly lobby government, their maker, for increased "rights" and advantage in a system skewed toward the rights and values of artificial entities because the government itself is an artificial entity/corporation!

Artificial entities and human entities are each driven by their bottom lines. In the case of the former, the bottom line is called gross profit for which they use every conceivable advantage to gain an ever increasing profit base for which the government sanctions, endorses and sides with their efforts in every imaginable way. Human beings also have a bottom line but their bottom line is driven by family, emotions, friendships and feelings that include love, joy, peace, satisfaction, caring for one another, and children. The bottom lines of humans and artificial entities are far different and humans have inadvertently let the values of artificial entities become predominant.

Who drives the values that we can't escape for even one moment of our day? Television and the other media hideously blasts marketing campaigns running in the millions and billions of dollars, and even cash receipts from our daily purchases are emblazoned with marketing suggestions, i.e., ways to part with our cash that we haven't even thought of yet! Corporations with their bottom-line profits and values have become so pervasive that we can plainly see the redistribution of wealth – to the corporations! Which US political party endorses and supports corporations over the values of humans? The idea of a few mothers that the military should hold a bake sale to buy a bomber is a far cry from the sophistication of the various corporations displaying their voracity at marketing to the humans – and sucking them dry!

That the humans have inadvertently allowed the artificial entities to become the leaders is our greatest error as a species thus far. Corporations, in the name of profits, have wreaked havoc over the entire face of the planet even to the point of using war to establish future markets. America, as a predominant leader, has inadvertently allowed its deranged (and soulless) artificial entities infect the rest of the planet with greed and avarice. There is no doubt about it, the American people have lost control of the artificial entities and public servants created for a distinct function/service for which they are voraciously attacking and undermining the values of human beings driven only by bottom line profits. Corporation's bottom lines are eclipsing the bottom lines of humans.

How did this happen? How did the humans allow the artificial entities, created by the hand of humans, to run amuck? How have the humans in the creation of the government, another artificial entity, allowed this to occur? The answer is illustrated by Alan Greenspan who, no doubt a very astute businessman is incredulous in his disbelief that the largest banks, i.e., artificial entities, are without the ability to regulate themselves, and in the face of deregulation and a free market economy, ramped up profits until they simply toppled over! Sure surprised Greenspan! But there is something basic to understand here.

The difference between human beings and artificial entities is that humans have a nervous system and guidance built right in, and artificial entities do not. Human beings have access to a messaging system that tells them right from wrong – a system that is capable of guiding them at the most fundamental as well as most sophisticated levels of life, if but they would listen – and to a greater or lesser extent they do, though we are very naïve to its use. This means that humans have access to insight from the Cosmos to drive our lives and values and bottom lines, and corporations do not.

Every living thing has a nervous system. It may not look like our own, but even the mineral kingdom has an intact connection with Innate Intelligence – and thus a nervous system of sorts. A rose is a perfect example of a living organism that exists for nothing other than to express beauty and harmony to the best of its ability. Clearly a rose contains a nervous system and in its perfect nonresistance, expresses itself perfectly. But what does "expressing *itself* perfectly" mean? It means that Innate Intelligence (the vast order of life) expresses through the nervous systems of the rose; that the purpose of the rose is as a vehicle for which Innate Intelligence expresses *itself* into the world!

This means that the more sophisticated the nervous system, the more capable life is of expressing itself through that particular vehicle. Said another way: what is real is Innate Intelligence expressing itself, and by the sophistication of the particular nervous system, Innate Intelligence expresses itself even more capably! Artificial entities, sans nervous system, have no connection to Innate Intelligence and thus no Innate Guidance. Hence they are missing the fundamentals of existence and self-preservation and common sense!

Humanity, on the other hand, has most sophisticated nervous system of anything on the planet, and in the sophistication of our nervous systems, similar to a Steinway piano that has been dropped a time or two, we are out of tune with our Maker. This is correctable and the work of VisionariesLab, Resonant Services and the Science of Receptivity.

Humanity is on the brink of something big! The economic crisis is a great metaphor for which Alan Greenspan is the ideal candidate to inadvertently identify the subtleties of life. As an expert on artificial entities, apparently no one was more surprised than he to discover that artificial entities are incapable of regulating themselves! Now to be fair to young corporations, corporations are capable of mirroring the values of their makers

and with a few tricks along the way, can serve far into the future as well-behaved artificial entities.

And, while it has always been believed that the lifeblood of the planet and the economy is money coursing through the institutions of the world i.e., the lifeblood of the artificial entities, we will soon see a truer sense of what works, as humans begin to rethink and retake responsibility for instilling *their* values onto the world stage. It is in intentional reality creation co-powered by humans and Innate Intelligence together that the humans will come into their own. And it is in the incredible sophistication of the human nervous system in alignment with Innate Intelligence that we will discover the richness of our possibilities.

When we discover that the most valuable (and renewable) resource on the planet is the humans; that we are the most sophisticated throughput device for Innate Intelligence to express *itself* - will the blue and white ball in space, third rock from the Sun, begin to take on a new resonance that will be felt far and wide and the humans we will get the ride of their lives,.

About the author. *J.Hamilton has been meditating for 36+ years and teaching personal empowerment for 18+ years. His book, **Visionaries Thrive In All Times: Blueprint for Reality Creation** (2005) is about the possibilities of individual and collective reality creation in alignment with Innate Intelligence.*

*He is completing a new book titled **52 Weeks of Visionary Focus**, excerpts of which are available each month in the [Vision Newsletter](#). His discoveries around nonresistance and witnessing life "smile by smile by smile" have become woven into these passages.*

*He has also recently completed (Jan 09) an eBook titled **Coherence Resonance Training** for the purpose of identifying access to nonresistance and the resultant Innate Guidance that becomes available. Key words: nonresistance, mindlessness, Innate Guidance, timelessness, solutions and timeliness. [Link](#)*
